

# DYE SUBLIMATION

## Vertical Surfaces - Dye Sublimation

The seamless appearance of Corian® Solid Surface is a blank canvas waiting to be painted. Image transfer with dye sublimation, color images can be embedded into the surface.

With similarities to the art of tattooing, dye sublimation involves permanently transferring images into solid surface material. The printed Corian® Solid Surface can then be fabricated and thermoformed in the same way unprinted sheets are processed.

## Dye Sublimation Process:

- Under heat and pressure, and using specialized equipment, the image is thermal transferred directly into the Corian® Solid Surface (like a tattoo).
- Once sublimated, the high quality image is permanently preserved into the Corian® Solid Surface resulting in a highly durable imaging surface.
- Many dye sublimation applications can be back illuminated as well.
- No post imaging coating is necessary with dye sublimation.

## Key Solutions:

- Design Flexibility • Custom Artwork • Non-Porous
- Color Won't Fade • Durable • Impact Resistant

EASY TO CLEAN

DURABLE

SEAMLESS
