

WINDOW SILL

Window Sill Applications

Durable. Non-Porous. Easy to Maintain. Repairable.

With its breakthrough stain, impact and heat-resistant properties – and over 100 colors and patterns – Corian® Solid Surface is ideal for a variety of commercial settings, including window sills.

Not only is the material non-porous and easy to repair, but it is UV-stable. This makes for ideal performance properties when exposure to sunlight may be a consideration.

With light cleaning (wipe-only clean up) and periodic maintenance, Corian® Solid Surface maintains its original beauty for years. Most importantly, if damaged, it can be repaired on-site and restored to its original condition – unlike most other surfacing materials.
