THE SEAMLESS WALL SOLUTION FOR HEALTHCARE

SEAMLESS

Zero seams. Nowhere for bacteria to hide.

ANTIBACTERIAL

Corian® is inherently non-porous. Certified safe for clinical environments.

BEAUTIFUL

Patented 3D patterns that elevate patient experience and HCAHPS scores.

IMPERVIOUS

Survives harsh disinfectants, 50,000+ cleaning cycles, and the toughest protocols.

SOUND-DIFFUSING

Textured surfaces scatter noise, reducing echo and improving speech clarity.

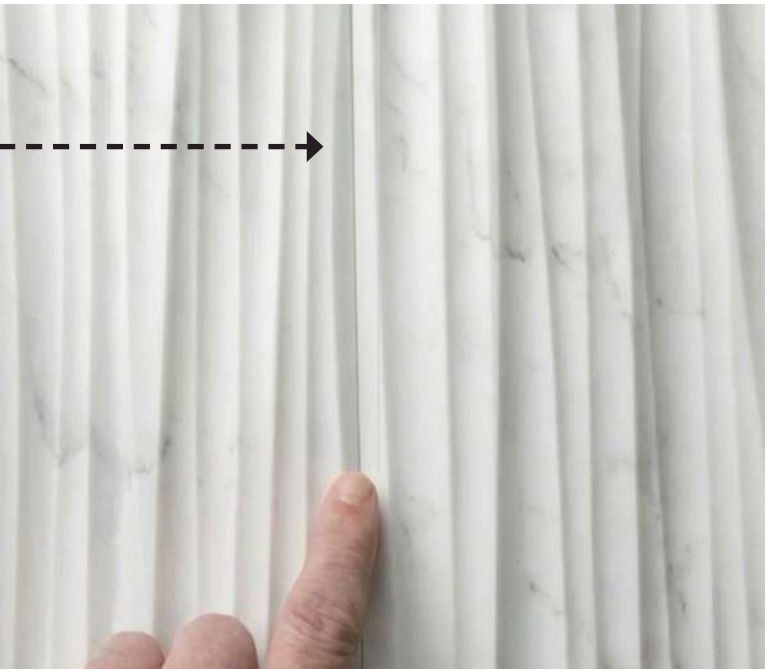

JOINTS FOR INFECTION CONTROL

INTERLOCKPANEL SEAMS

Our patented puzzle-piece system creates virtually invisible joints, tighter than 1/32”.

LESS THAN
1/32 in

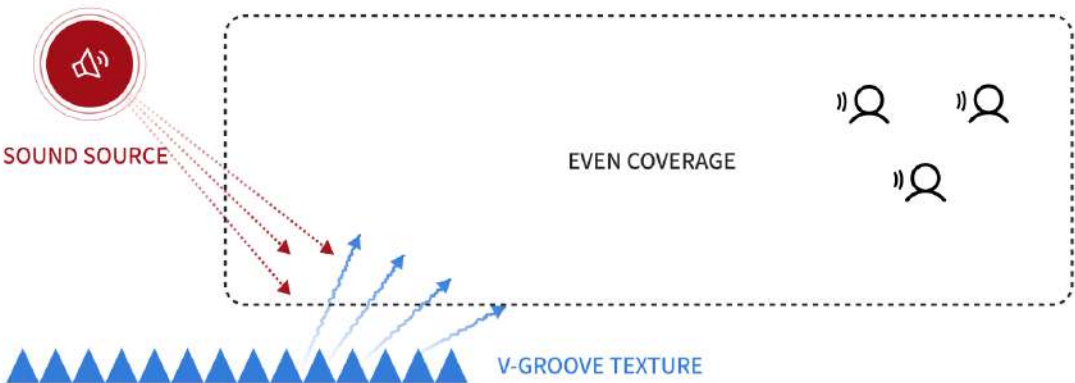

ENGINEERED FOR SOUND DIFFUSION

V-GROOVE TEXTURE PROFILE

Precision-carved Corian® Solid Surface for optimal acoustic diffusion.

OPTIMIZED FOR BALANCED ACOUSTICS

Evenly distributed sound eliminates dead zones and hot spots.

- ☒ Sound diffusion
- ☒ Uniform coverage
- ☒ No flutter echo
- ☒ Natural ambiance

IRVINE, CA

CITY OF HOPE

Partnering with HOK, we brought M|R Walls to the main lobby and feature column elements at City of Hope Irvine, creating sculptural vertical surfaces that anchor the waiting experience.

The elegant textured pattern wraps seamlessly around curved corners and integrates wayfinding and digital displays directly into the Corian® surround. The result is a calming architectural feature that softens the space while maintaining the clean precision required in a clinical environment.

HYGIENE + WELLNESS IN ONE SOLUTION

This installation provides a continuous, high-performance surface designed for rigorous healthcare standards. Impact-resistant, easily maintained, and built for constant public interaction, the feature elements support the functional demands of the space while reinforcing a calm, welcoming atmosphere.

PHILADELPHIA, PA

JEFFERSON HEALTH

Partnering with Stantec and Ennead Architects, we brought M|R Walls to the elevator and hallways of 17 floors at Jefferson’s Honickman Center in Philadelphia.

The tactile cloud pattern helps reduce sensory stimulation for patients, with seamless carvings and curved panels that flow smoothly around corners. Our seamless, high-touch surfaces enhance the building’s visual appeal but also contributed to a more comforting, supportive atmosphere.

INFECTION CONTROL ACROSS 17,000 SQ FT

The textured Corian® panels are seamless, non-porous, and grout free throughout the entire hallway, creating a durable, low-maintenance barrier that aids in lowering risk of infection spread.

INSPIRED HEALING AT CHILDREN’S EYE LEVEL

Elevated, impeccably clean surfaces communicate excellence at first glance. Engineered to maintain their like-new appearance with minimal upkeep, our walls preserve and enhance the integrity of any healthcare environment.

SANTA BARBARA, CA

COTTAGE CHILDREN’S MEDICAL CENTER

Cottage Health was looking to create a family-centered space for high-quality care for their new Pediatrics Clinic. Our job was to create custom surfaces with a whimsical feel for children to admire.

Our team designed a main focal wall featuring a calm, illuminated design, a branded logo and 103 backlit sconces that spread from the reception through the hallways and into exam rooms.

EASY TO CLEAN, ANTI-BACTERIAL SURFACES

By fully cladding high-touch areas from the elevator lobby through the hallways, we created a durable, low-maintenance surface that supports rigorous hygiene protocols without compromising aesthetics. The result is a refined, modern space that feels impeccably clean and reinforces trust at every touchpoint.

OVERLAND PARK, KS

DR. VINCE CLINICAL RESEARCH

Dr. Vince Clinical Research is recognized as one of the most luxurious research centers in the world, and the walls were designed to reflect that same level of distinction.

Our Chicago design welcomes study participants at reception and continues seamlessly through the corridors, creating a cohesive and elevated experience from arrival to exam room. RGB backlighting enhances the dimensional texture, allowing the environment to shift in tone while maintaining a calm, clinical sophistication.

SPEC READY DESIGNS SELECTED FOR HEALING

Curated to promote wellness and healing
Inspired by nature, shaped by calm, rhythmic flow

RUTGERS CANCER CENTER

CLOUD

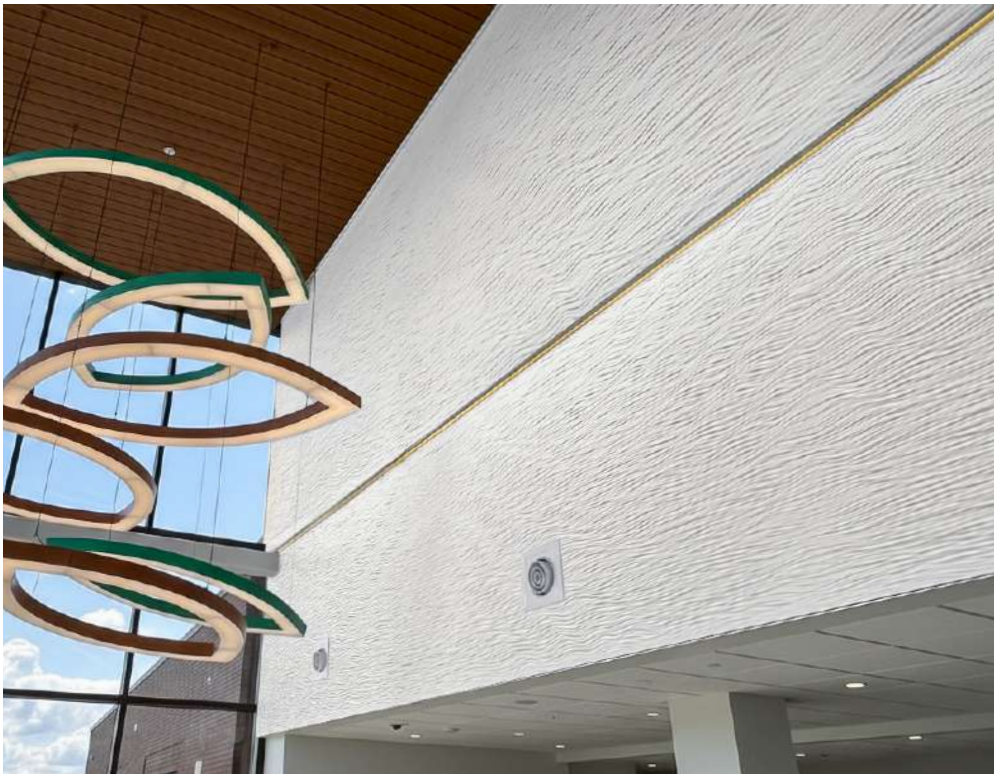

Soft, billowing forms drift like a sky full of clouds, bringing lightness and calm.

RIVERSIDE SMITHFIELD HOSPITAL

LAKE

Gentle, undulating lines ripple across the surface like small waves on a still lake, bringing natural calm into any space.

PALISADES

Curving forms and layered contours create a sense of grounded strength and natural beauty.

SANTA CLARA MEDICAL CENTER

CHICAGO

Organic stripes flow across the surface in a rhythmic pattern, offering a sense of motion and structure.

CUSTOM DESIGNS INSPIRED STORYTELLING

For healthcare projects that require
bespoke designs and solutions

FRANCISCAN HEALTH

ROSE WINDOW, ILLUMINATED FOR HEALING

Our Design Assist process allows us to take your design vision and translate it to real surfaces through our state-of-the-art digital fabrication technologies. We’ve developed ample custom systems to satisfy even the most specific needs.

LIFELINE OF OHIO

ROOTED IN NATURE, DESIGNED TO INSPIRE

We worked alongside branding firm Tenfold to engineer a donor recognition wall featuring hundreds of individually carved Corian® leaves — each one backlit and illuminated as a new donation is made. A living installation that grows over time, built without the need for renovation.

NYPCC

BRANDING THAT LIGHTS UP THE ROOM

Custom branding walls transform your visual identity into an architectural feature. Seamlessly integrated into 3D carved surfaces, your identity becomes part of the environment while maintaining hospital-grade hygiene and durability.

BACKLIGHTING SOLUTIONS

As healthcare specialists, we develop surface designs and advanced digital fabrication techniques that address the rigorous hygiene and safety demands of modern health and wellness environments.

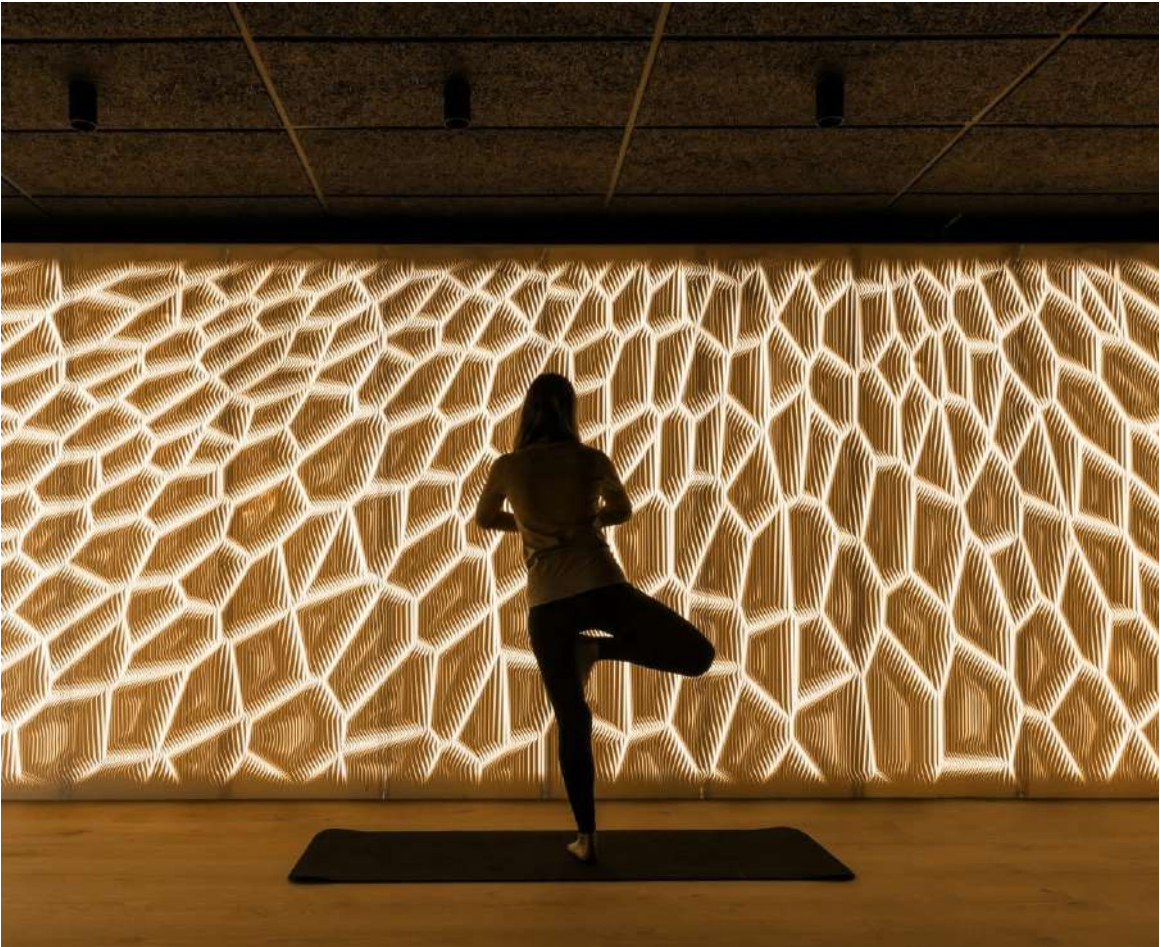

The translucent quality of Corian allows us to create striking backlit surfaces that enhance depth and dimension. Choose from standard white illumination or programmable RGB lighting systems with custom animated scenes to shape the atmosphere of your space.

REVERSE BACKLIGHTING FOR A SMOOTH FRONT FACE

For environments requiring enhanced cleanability, panels can be installed in reverse. The smooth face is positioned outward for effortless wiping and maintenance, while the carved texture remains on the interior, illuminated from within. This approach preserves the visual impact of the design while providing a seamless, easy-to-clean surface ideal for high-touch clinical settings.

Learn more about our Backlight solutions.

ELEVATOR LOBBY

Set the tone from the moment of arrival with sculpted surfaces that create a cohesive, welcoming first impression.

HALLWAYS

Durable, antimicrobial surfaces designed to withstand heavy traffic while supporting infection control throughout circulation spaces.

QUIET & CALM ROOMS

Create serene, contemplative environments that reduce sensory stress while maintaining seamless, hospital-grade hygiene. Sculpted surfaces that evoke softness, reflection, and quiet strength.

HEADWALLS

Hygienic, seamless surfaces resist bacteria where patients need it most.

BEHAVIORAL HEALTH

Designed for behavioral health environments, immersive backlit walls help regulate sensory input, creating spaces that feel calming, grounding, and supportive.

NURSE STATION & RECEPTION

High-traffic areas remain pristine with durable, antimicrobial surfaces designed for effortless cleaning.

FEATURE WALLS

Create striking focal points while maintaining exceptional hygiene and long-term durability.
